Press Release

Fuel Oil Transfer Pump Set Re-Design Cuts Manufacturing Costs and Increases Efficiency

Danbury, CT – August 1, 2004 - Preferred Utilities announces the launch of the **Newly Re-Designed** Fuel Oil Transfer Pump Sets. From a simple, low cost pump set to the state-of-the-art duplex pump sequencing and monitoring system, Preferred's Fuel Oil Transfer Pump Sets have an undivided responsibility of delivering fuel at a predetermined pressure and flow.

- **Semi-Automatic Fuel Oil Transfer Pump Set** – Provides both manual “On” or “Off” operation or automatic operation in response to a “Call for Operation”.
- **Automatic Fuel Oil Transfer Pump Set and Monitoring System** – A state-of-the-art duplex pump sequencing and monitoring system. The system includes automatic lag pump back-up features that improve fuel system availability and safety. A pump set mounted LCD display is used to monitor day tank and pump set status and alarms.
- **Thermopump Fuel Oil Transfer and Heating System** – Provides above ground oil storage tank and exposed suction and return lines with a re-circulating flow of warm oil. Additionally, the Thermopump can provide automatic duplex pump sequencing and monitoring for boiler and day tank applications.
- **Automatic Fuel Oil Filtration Pump Set** – This self contained, fully automatic system removes water, suspended rust, dirt and other contaminants in order to maintain the quality and purity of stored diesel fuel.
- **Fuel Oil Day Tank and Pump Set** – Offers a quick and economical fuel pump solution and provides a local supply of distillate or diesel fuel for boilers, emergency generators or other stationary engine driven or oil fired equipment.

Contact us today to find out how our newly re-designed Fuel Oil Transfer Pump Sets can increase your fuel oil transfer system efficiency. For more information, please visit us at www.preferred-mfg.com.
